Reflections from Dr. Aungsiya Krataytong
(Lecturer at Srinakharinwirot University's Faculty of Education, Thailand)

'Maths Through Stories' Workshop

Chulalongkorn University, Bangkok
Tuesday 19th May 2026

"Hello, I am Dr. Aungsiya Krataitong. Today, I am absolutely delighted to have participated in the 'Maths Through Stories' workshop. I believe that 'Maths Through Stories' is a pedagogical approach that can be beautifully adapted for kindergarten, primary, and secondary school levels. The process itself is uncomplicated, as we simply begin with a pencil, paper, creativity, and pedagogical support from the teacher. This makes learning mathematics through stories meaningful, while also fostering children's creativity. I believe that 'Maths Through Stories' is highly beneficial for adaptation and application in Thailand. Currently, Thailand is still in need of new, supportive approaches to teach mathematics – a subject that can often seem difficult and abstract. Having 'Maths Through Stories' serves as an excellent strategy to address this pain point, helping children realise that mathematics can actually be applied to real life. Crucially, it allows children to have fun weaving stories together with mathematical concepts. I truly think that 'Maths Through Stories' will be a great solution to tackle existing educational challenges, as well as develop and improve how Thai children learn mathematics, making it much more meaningful for them. Thank you."
