Reflections from Dr. Panutsorn Jaruchainiwat
(Lecturer at Chulalongkorn University's Faculty of Education, Thailand)

'Maths Through Stories' Workshop

Chulalongkorn University, Bangkok
Tuesday 19th May 2026

"Hello, my name is Panutsorn Jaruchainiwat. I am a lecturer in the Early Childhood Education program at the Faculty of Education, Chulalongkorn University. Today, I gained knowledge from Dr. Natthapoj, which is incredibly useful. The 'Maths Through Stories' teaching method is highly appropriate for early childhood because it uses story picture books as a foundation for development. It is also an extremely beneficial approach for developing a deep understanding of mathematical concepts. This should help children learn mathematics meaningfully and allow them to apply this knowledge to their daily lives, which I believe will greatly help young children develop their full potential in mathematical learning. As for applying this knowledge myself, in my role as a university lecturer, I plan to bring this methodology to develop our university students (pre-service teachers). This will provide our students with a much deeper grasp of mathematical concepts, enabling them to connect and channel this knowledge into their own teaching of young children. Ultimately, this will help kindergarteners learn mathematics meaningfully and enjoy their learning experience much more."
