Reflections from Sasiwimon Nakpradit
(a secondary school at Assumption College)

‘Maths Through Stories’ Workshop

Chulalongkorn University, Bangkok
Tuesday 19th May 2026

“At first, I had a thought in my mind whether this teaching approach would be appropriate to use with secondary school students, since they are older kids. But once I attended the training workshop, I started to change my mind. As students grow older, the mathematics content becomes increasingly difficult and more abstract. This often leads to questions like, “Teacher, how is this topic useful? How can I apply it to my daily life?” The tool that can be used to answer these questions is storytelling. This is because mathematics is not just about numbers; it is a tool used to solve real-world problems. Thank you.”
