Reflections from Dr. Trairat Iampan
(Assistant Director of Bangkok Primary Education Service Area Office, Thailand Ministry of Education)

‘Maths Through Stories’ Workshop

Chulalongkorn University, Bangkok
Tuesday 19th May 2026

“I am Trairat Iampan from the Bangkok Primary Education Service Area Office. Teaching mathematics through the ‘Maths Through Stories’ approach enables learners to connect mathematics with their daily lives. Students who learn this way will see that mathematics is not something far removed from them; rather, it is something that can ultimately solve problems in their everyday lives. In the end, they will see the value of it and develop a love for learning mathematics. Furthermore, the ‘Maths Through Stories’ approach serves as a way to connect various academic disciplines, whether in language, art, or different cultures. I strongly believe that both learners and educators will benefit greatly if they implement ‘Maths Through Stories’. Consequently, our Area Office will take ‘Maths Through Stories’ to scale up and expand its impact further. I must thank Dr. Vincent and the team for organising such a wonderful activity. Thank you.”
