

Henry The Hexagon

by Sophie Walker

Henry the hexagon lived in Shapeville. Henry loved being a regular hexagon. He could show off to everyone that he had six equal sides and six equal angles. He made fun of the pentagons. He made fun of the squares. He made fun of the triangles. He even made fun of the circles. The other shapes were getting sick and tired of Henry's boasting, so they decided to teach him a lesson.

The other shapes went to go see the maths crystal ball and asked if it could help. This ball was very powerful and could do anything. They told the ball that they wanted to teach Henry a lesson. It told them that it would work its special shape magic to teach Henry a very important lesson.

The next day, Henry woke up and he was a regular pentagon. Henry went out boasting and making fun of all the other shapes. The hexagons started to laugh and made Henry feel very bad. Henry realised that he shouldn't let a few hexagons make him feel bad. He could still show off to everyone that he had five equal sides and five equal angles. He made fun of the squares. He made fun of the triangles. He even made fun of the circles.

The next day, Henry woke up and he was a square. Henry went out boasting and making fun of all the other shapes. The hexagons and pentagons started to laugh and made Henry feel very bad. Henry realised that he shouldn't let a few hexagons and pentagons make him feel bad. He could still show off to everyone that he had four equal sides and four equal angles. He made fun of the triangles. He even made fun of the circles.

The next day, Henry woke up and he was an equilateral triangle. Henry went out boasting and making fun of all the other shapes. The hexagons, pentagons and squares started to

Henry realised that he shouldn't let a few hexagons, pentagons and squares make him feel bad. He could still show off to everyone that he had three equal sides and three equal angles. He even made fun of the circles.

The next day, Henry woke up and he was a circle. Henry went out boasting and making fun of all the other shapes. Everyone started to laugh and started to make Henry feel very very bad. Henry realised that he shouldn't have boasted and made fun of all the other shapes. He decided to go apologise to all the other shapes. He said sorry to the pentagons

He said sorry to the squares and they forgave him. He said sorry to the triangles and they forgave him. He even said sorry to the circles and they forgave him too. He promised all of the shapes that he wouldn't boast and make fun of them any more.

The next day, Henry woke up and he was a hexagon again. Henry was very happy. He went out with his friends and like he promised, didn't boast or make fun of the other shapes ever again.

A large green hexagon with a thick black border is centered on a white background. The hexagon is filled with a textured, light green color that looks like it was painted with a brush. Inside the hexagon, the text is written in a simple, black, sans-serif font.

Henry the
hexagon lived a
wonderful life in
Shapeville, until
one day...
Everything
changed.
