

Division with remainder
or Magic bracelets

Maria

Teyblyum

This is Luna. She is so nice, she always helps everyone who needs help. This is Big Giant, he is caring. Big Giant lives in the cave that is in the Mystic forest. Mystic forest is a rainbow place, where there are a lot of interesting creatures.

Big Giant

Luna

Today is the birthday of Big Giant's kids. They will be 1 year. Giants have a tradition that when their kids will be 1 year old they have to give them magic bracelets. But giants always have 5 kids, so they always have 10 bracelets. But Big Giant has 3 kids and 10 bracelets. What to do? Big Giant didn't know division with remainders so

he cried. Then Luna heard that someone is cring so she ran to his cave. "What hapened," asked Luna. "Today is the birthday of my kids and I can't share the gifts." "I will help you," told Luna. "Thankyou. What is your name?" "My name is Luna, what is your name?" "My name is Big Giant." "How many gifts do you have?" asked Luna.

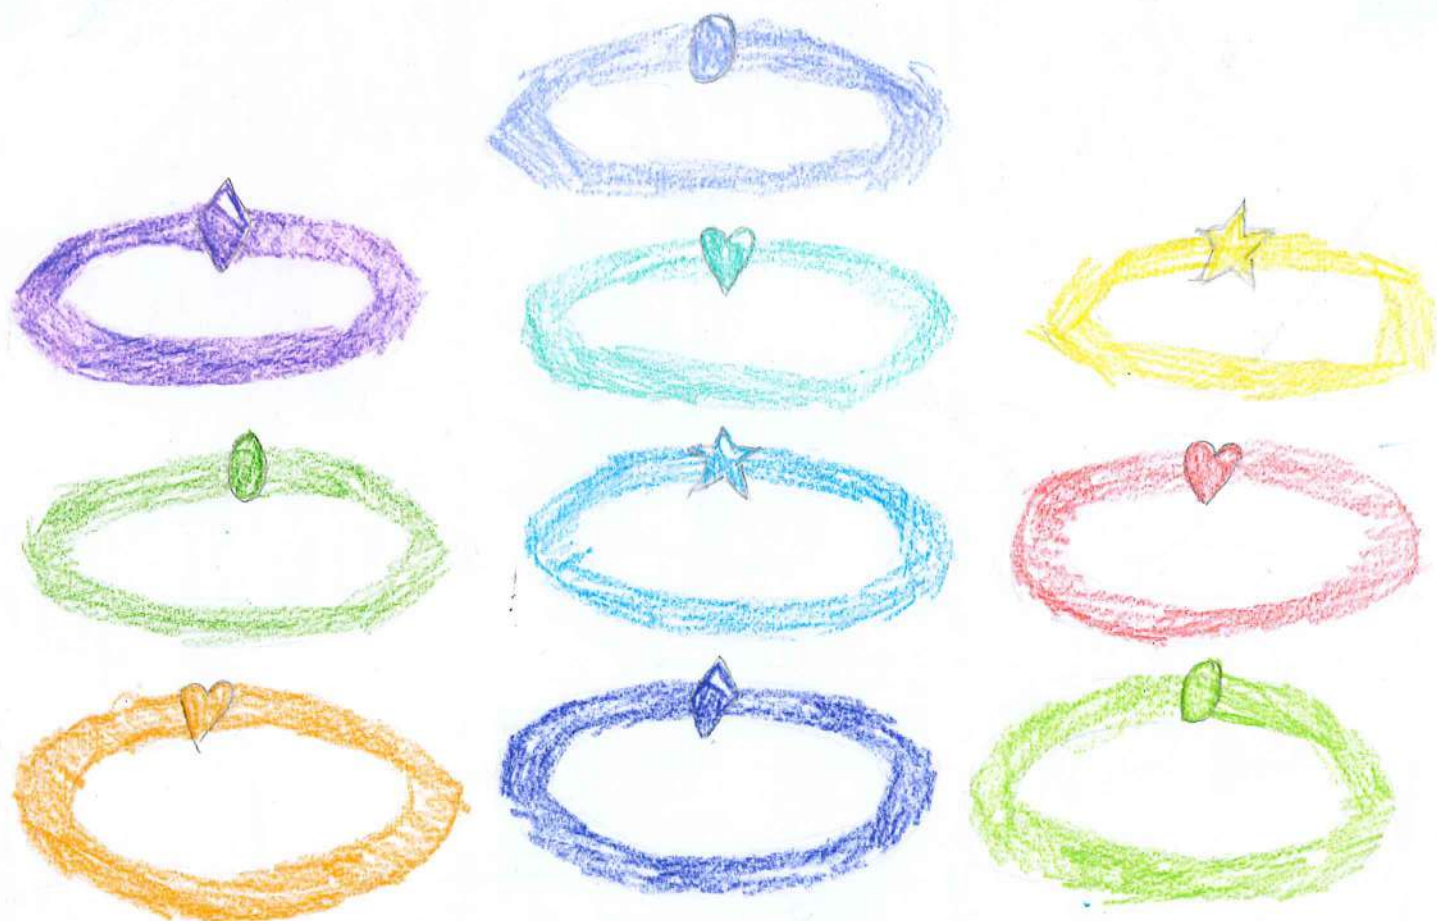

"I have ten magic bracelets. If you wear the red bracelet you will be creative. If you wear the orange bracelet you will be kind. If you wear the yellow bracelet you will be generous. If you wear the light green you will be strong. If you wear the green bracelet you will be responsible. If you wear the turquoise bracelet you will be astute. If you wear

light blue bracelet you will be dexterous. If you wear the azure bracelet you will be brave. If you wear the blue bracelet you will be wise. If you wear the purple bracelet you will be clever," said Big Giant.

"Okay I'll try to explain you division with remainders. Do you know the number that we can divide by three and that is smaller than ten?" asked Luna

"Yes that is three," answered Big Giant
"Hahahaha!" laughed Luna. "You are

correct, but we need the biggest number that we can divide by three and that is smaller than ten."

"Ow! That is nine," answered Big Giant.

"How much is nine divided by three?" asked Luna.

"Three," answered Big Giant.

"That means that you can give them three bracelets each. How much is ten minus nine?" asked Luna.

"Ten minus nine equals one," answered Big Giant.

"This bracelet is the remainder and it will stay with you," told Luna.

"Horay! Thanks for explaining me division with remainders." Big Giant called his kids and started giving them bracelets. "Army, the bracelet of creativity, bracelet of kindness and the bracelet of generosity are

for you. George, the bracelet of dexterity, bracelet of responsibility and the bracelet of gumption are for you. Eric, the bracelet of cleverness, bracelet of courage and the bracelet of strength are for you." "What to do with the last bracelet? Oh!" thought Big Giant. "Luna, you helped me, so the bracelet of wisdom is yours" "Thank you! You are so kind. I always wanted to be wise," thanked Luna. "Let's celebrate this lovely birthday. Sit at our party table" called Big

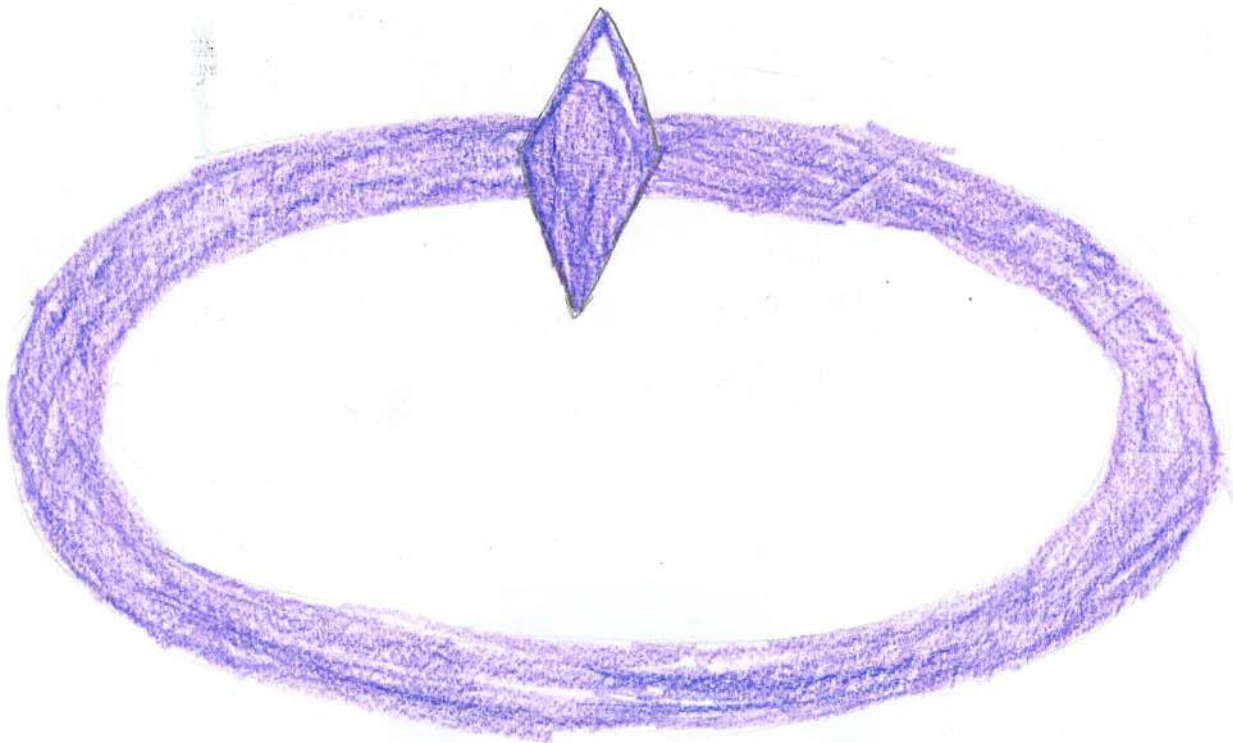

Giant. Everyone was happy. The day was great. Everyone went to bed. The next day Anny, Eric and George helped everyone in the forest. Luna went to help others. Big Giant explained division with remainders to his kids when they finished helping.

THE END

This is the bracelet of wisdom.
Use it cleverly.

I'm Maria, Teybyum,
From I.S.O.P 35.

I am 8 years old, My
school is in Cyprus.
My friend Sonia
inspired me to write
the story about
division with remainders
because I wanted to
help her to understand
this topic. I like
rainbow.
