

Lines United

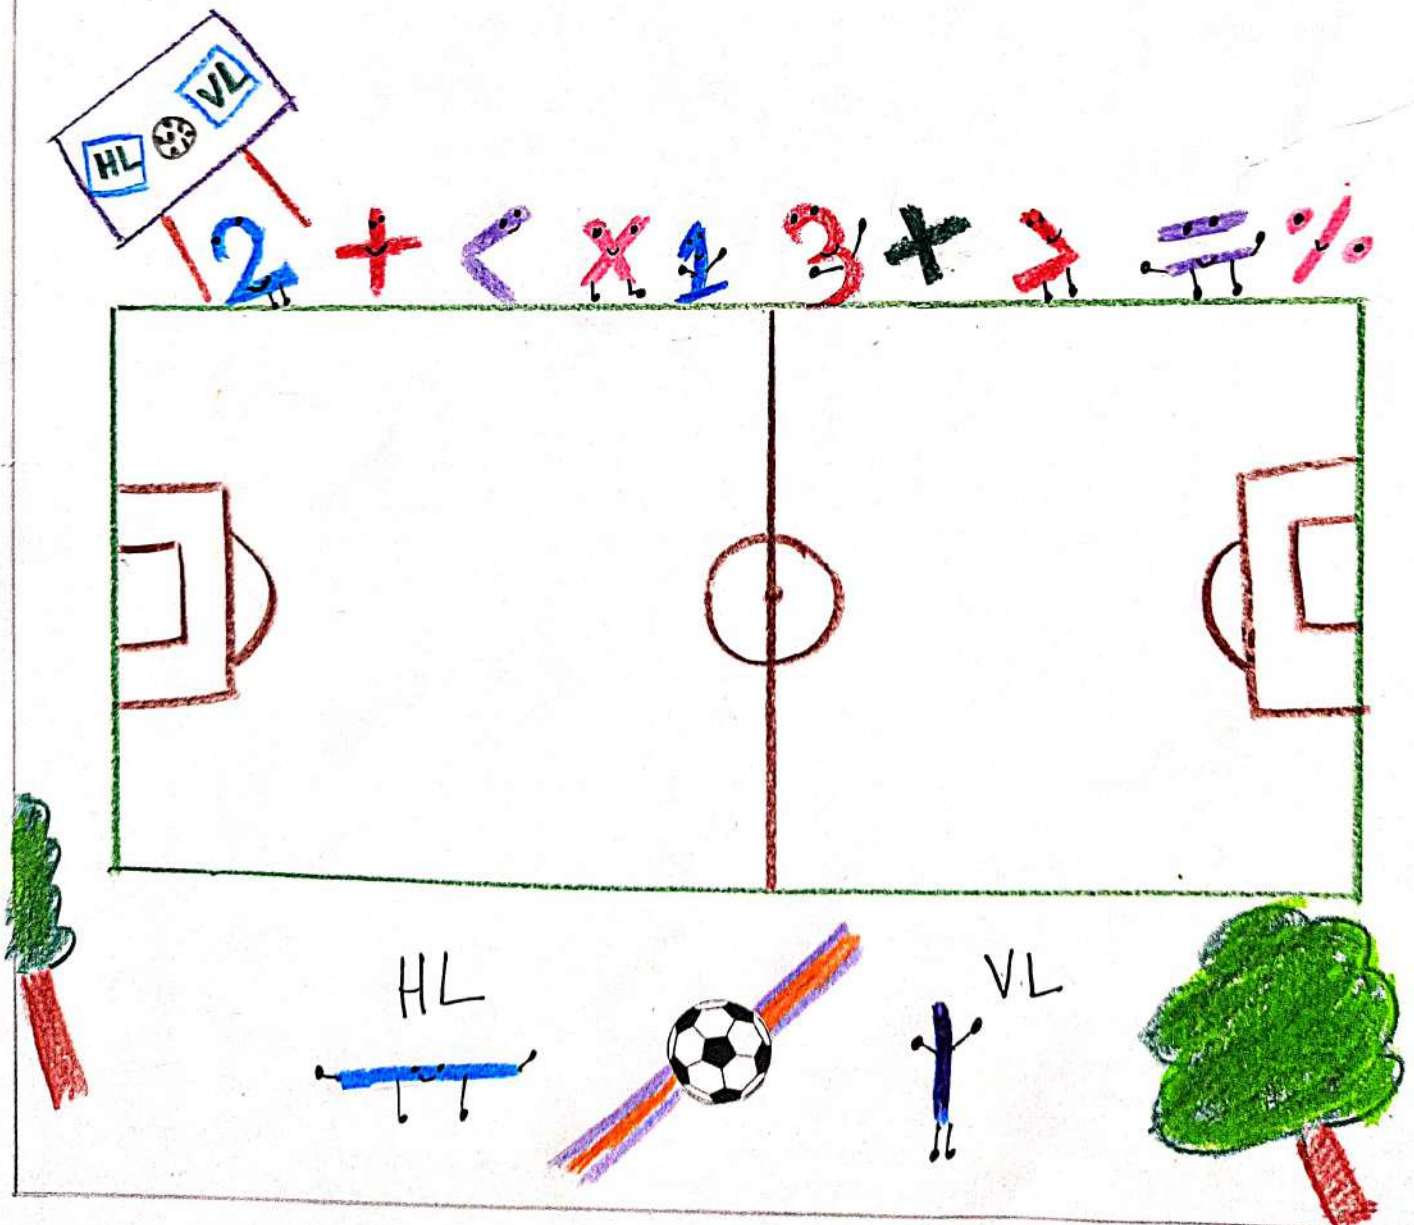

"A story of team work"

Written and illustrated by: Syed Danish-5B

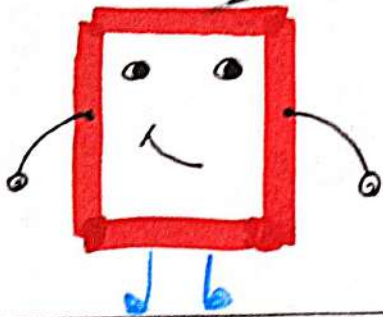

The shape land stadium was very well known for hosting football matches. Today, the stadium has been reserved for horizontal lines and vertical lines.

A large audience of symbols and numbers from the math world had gathered to see the famous match between horizontal and vertical lines.

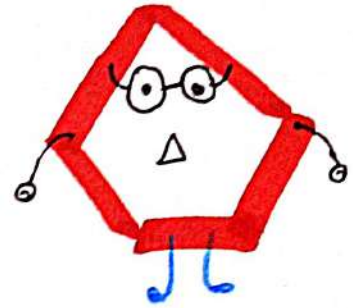

Suddenly a group of polygons came charging in and said,

"We are Team STRUCTURE. No team has ever scored a goal against us."

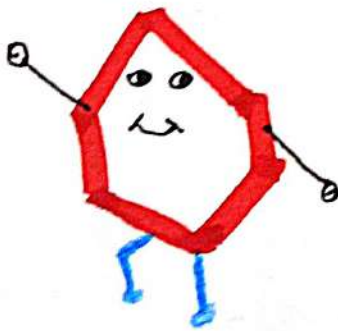

"We challenge you a match of football"

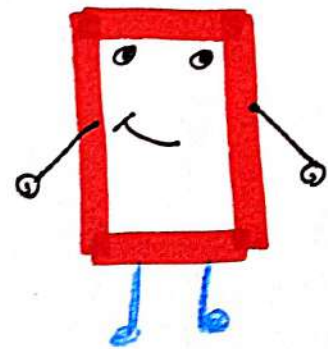

A little horizontal line said, "We accept the challenge."

"Well then, we will play here at the Shape Land Stadium exactly after one month," said Hexagon.

"Your team is all about simple lines we will win this for sure, lines are nothing," said Rectangle

As soon as the polygons left, one of the lines said we will never win against the physically strong polygons.

"No team has ever beaten the polygons in the game of football what chance do we have?" said the vertical line.

The horizontal line said, now that we have accepted the challenge let us find how to defeat them!

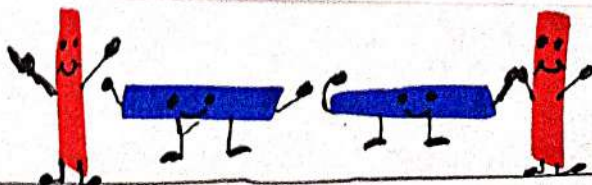

The smart horizontal line interrupted and said, "If we want to beat the polygons we must team up with the diagonal line team and seek guidance from their coach Mr. Protractor."

One of the line asked, "Who is Mr. protractor?"

Vertical line said, "He will help us to measure and goal in a perfect angle". You know football is all about angles.

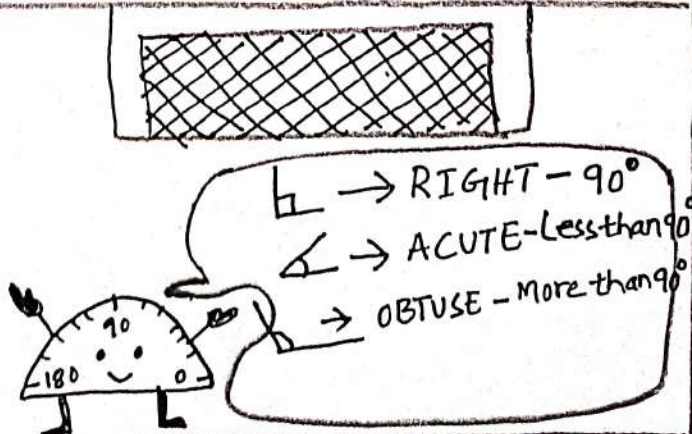

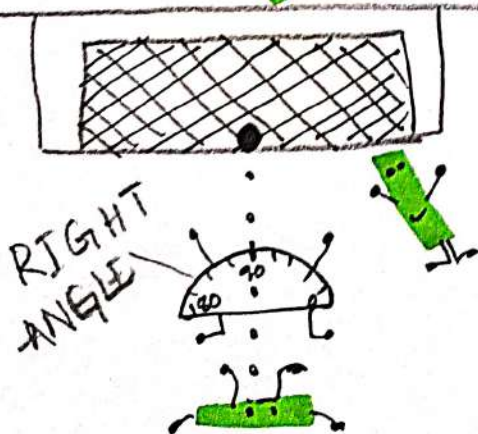

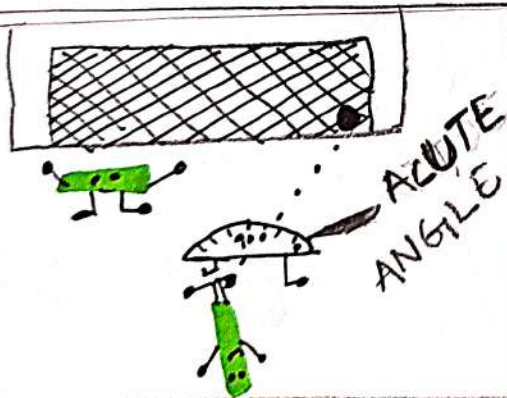

WOO W!!!

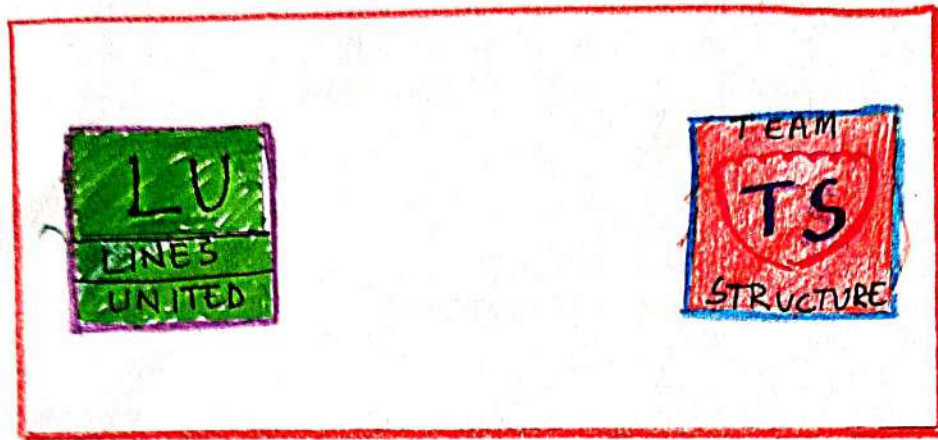

A new team with the lines was formed and they called it "Lines United".

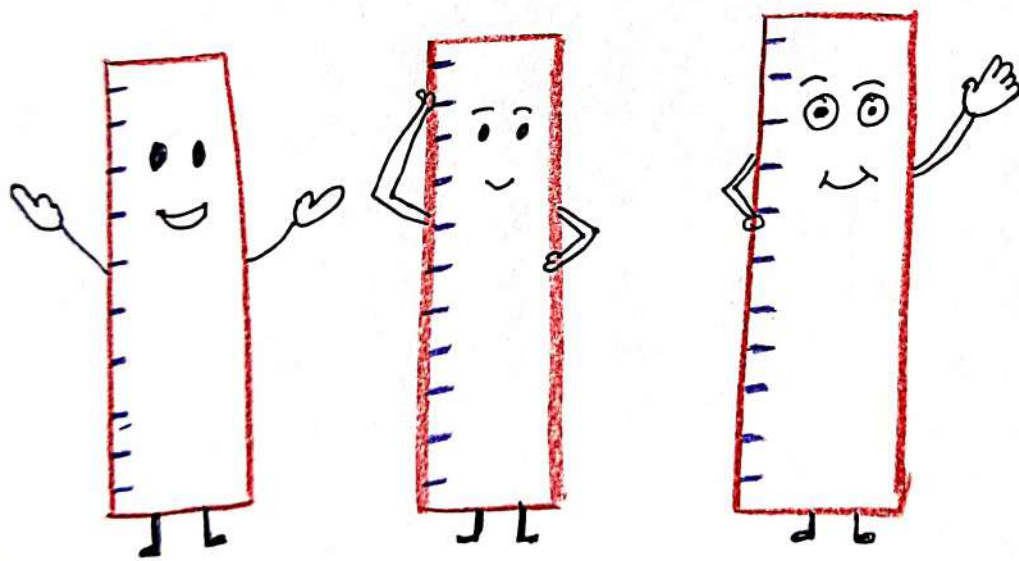

The team practiced day and night to perfect all the angles with help of Mr. Protractor.

The big day finally arrived.

The towers - which is a group of tall Rulers were appointed to referee the match and ensure a fair game.

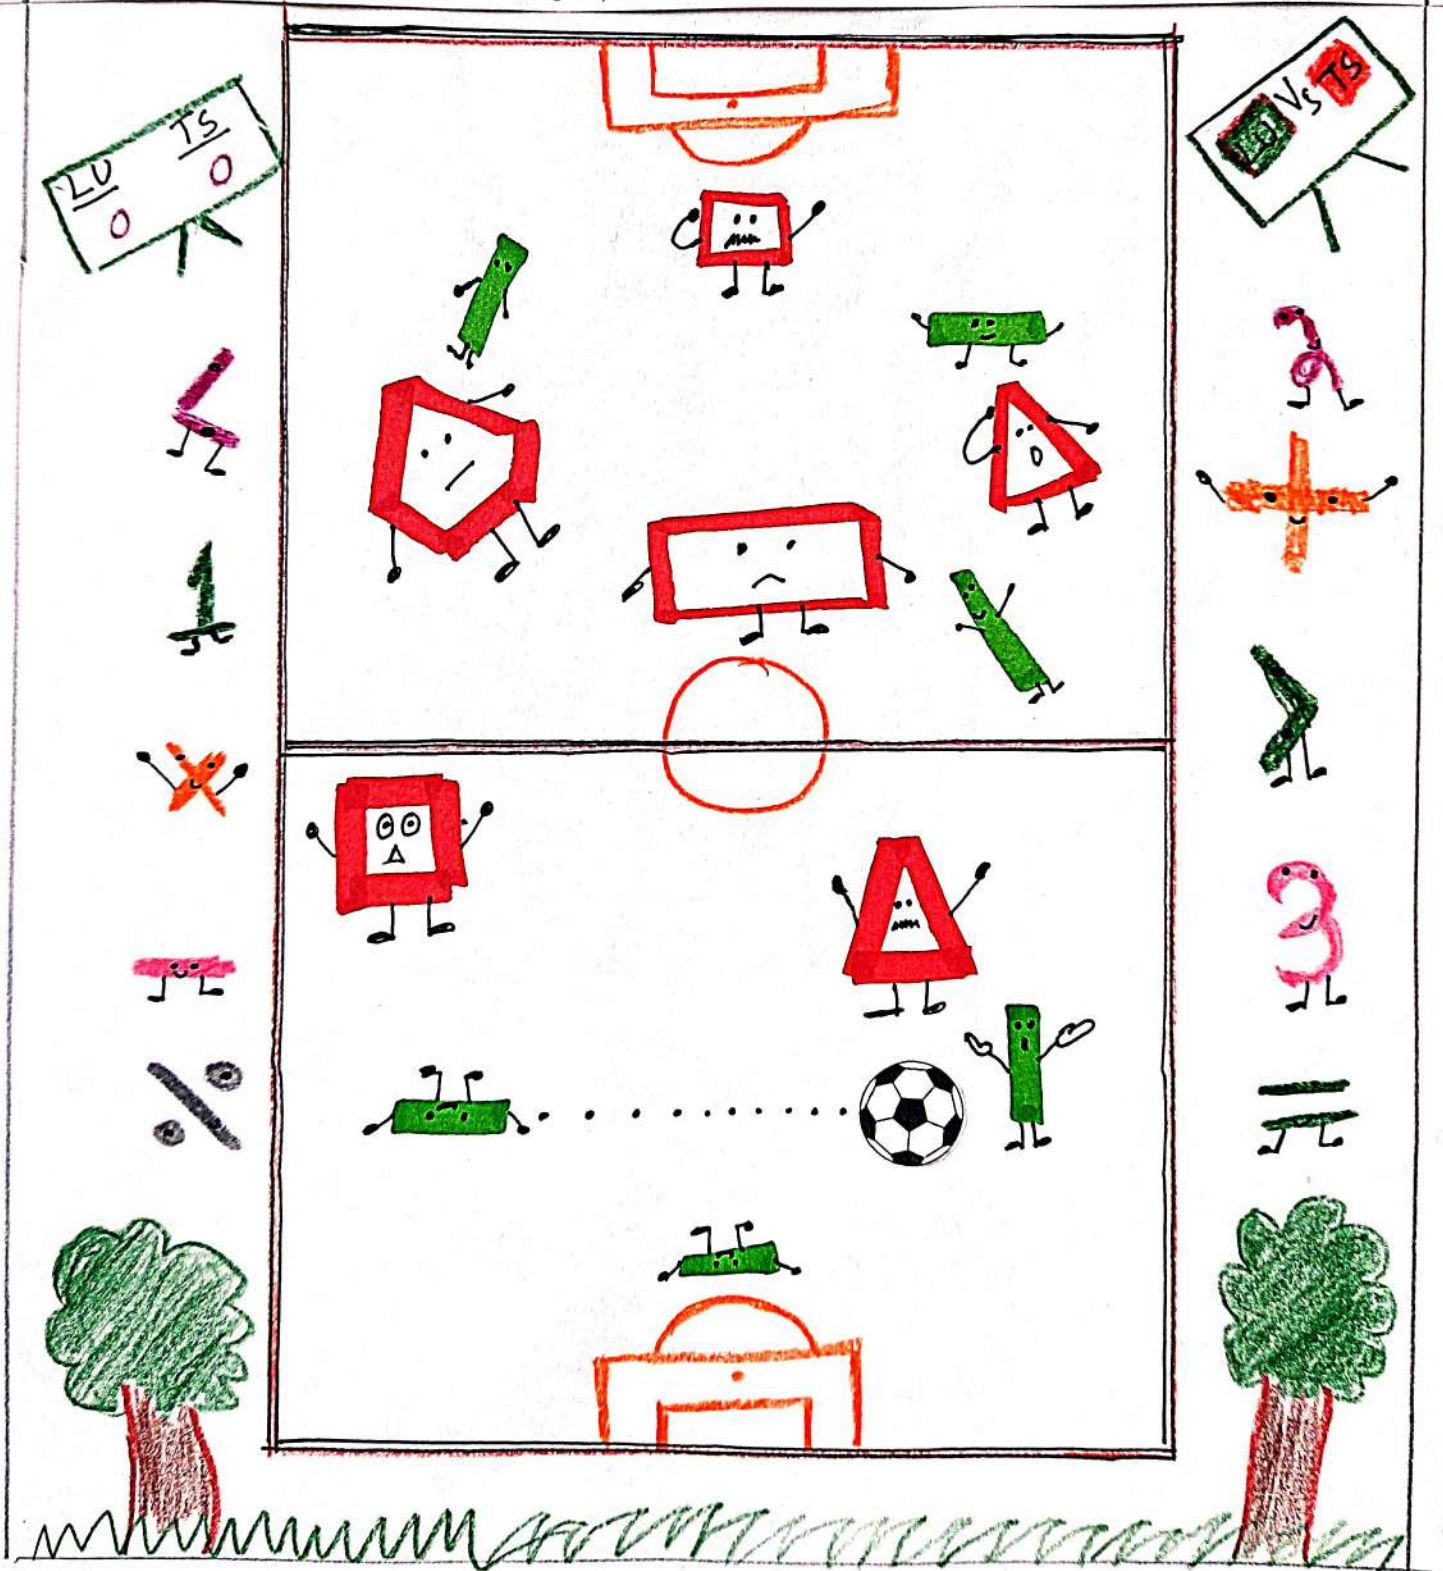

A Ruler blew the whistle and the game started.

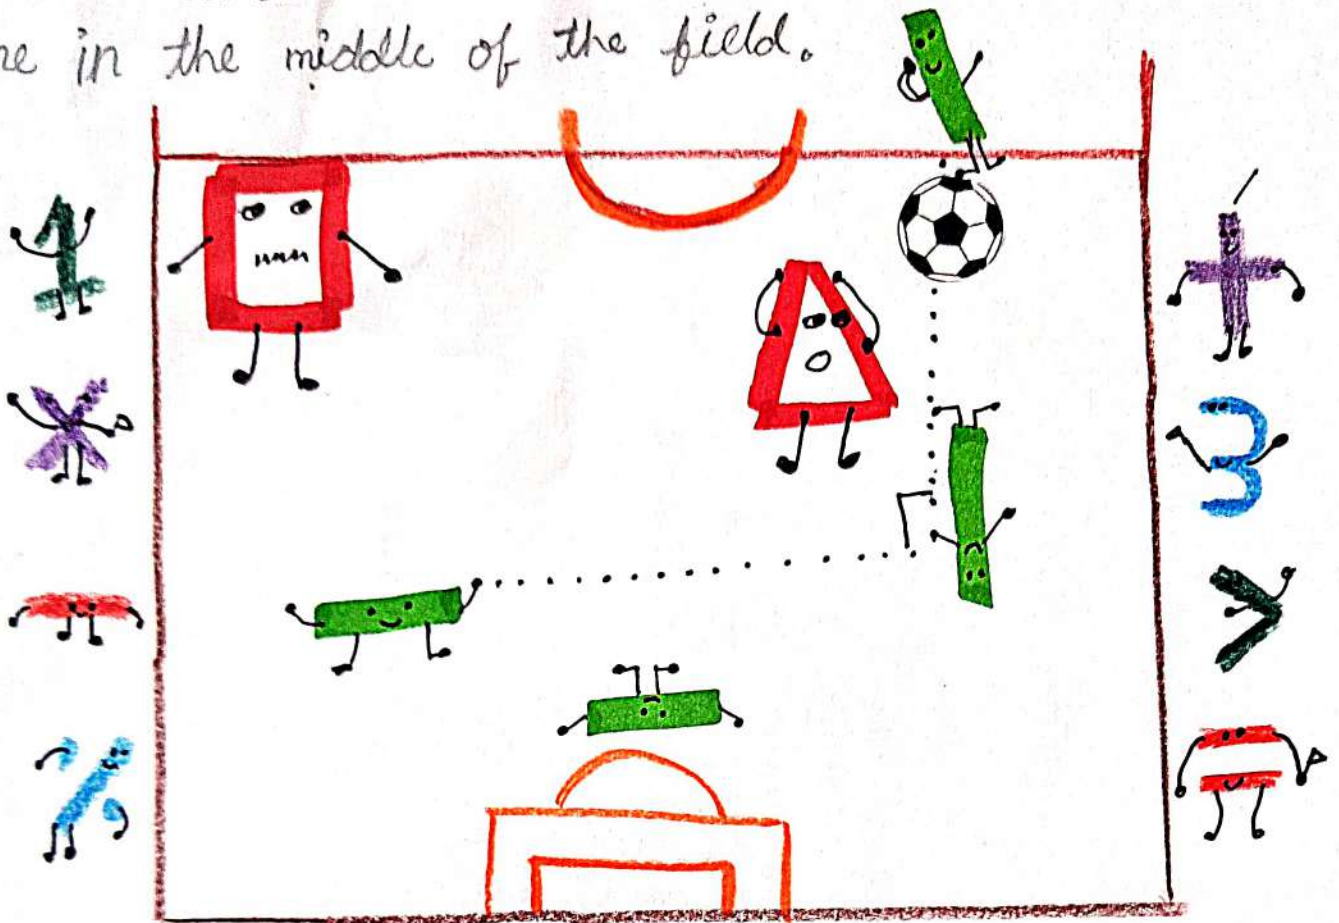

One of the polygons snatched the ball and raced across the stadium to shoot a goal.

The square could not find space to shoot and ended up giving away the ball to Horizontal line.

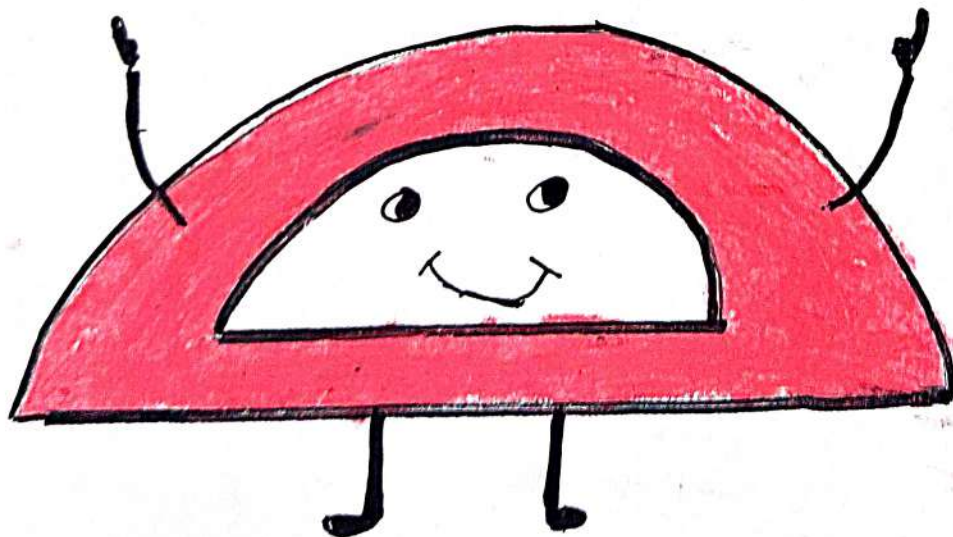

Horizontal line noticed that vertical line is free on the right side of the field and quickly passed the ball to him.

Vertical line then kicked the ball to diagonal line in the middle of the field.

HURRAH! "you made a **Right angle!**"
Shouted Mr. Protractor.

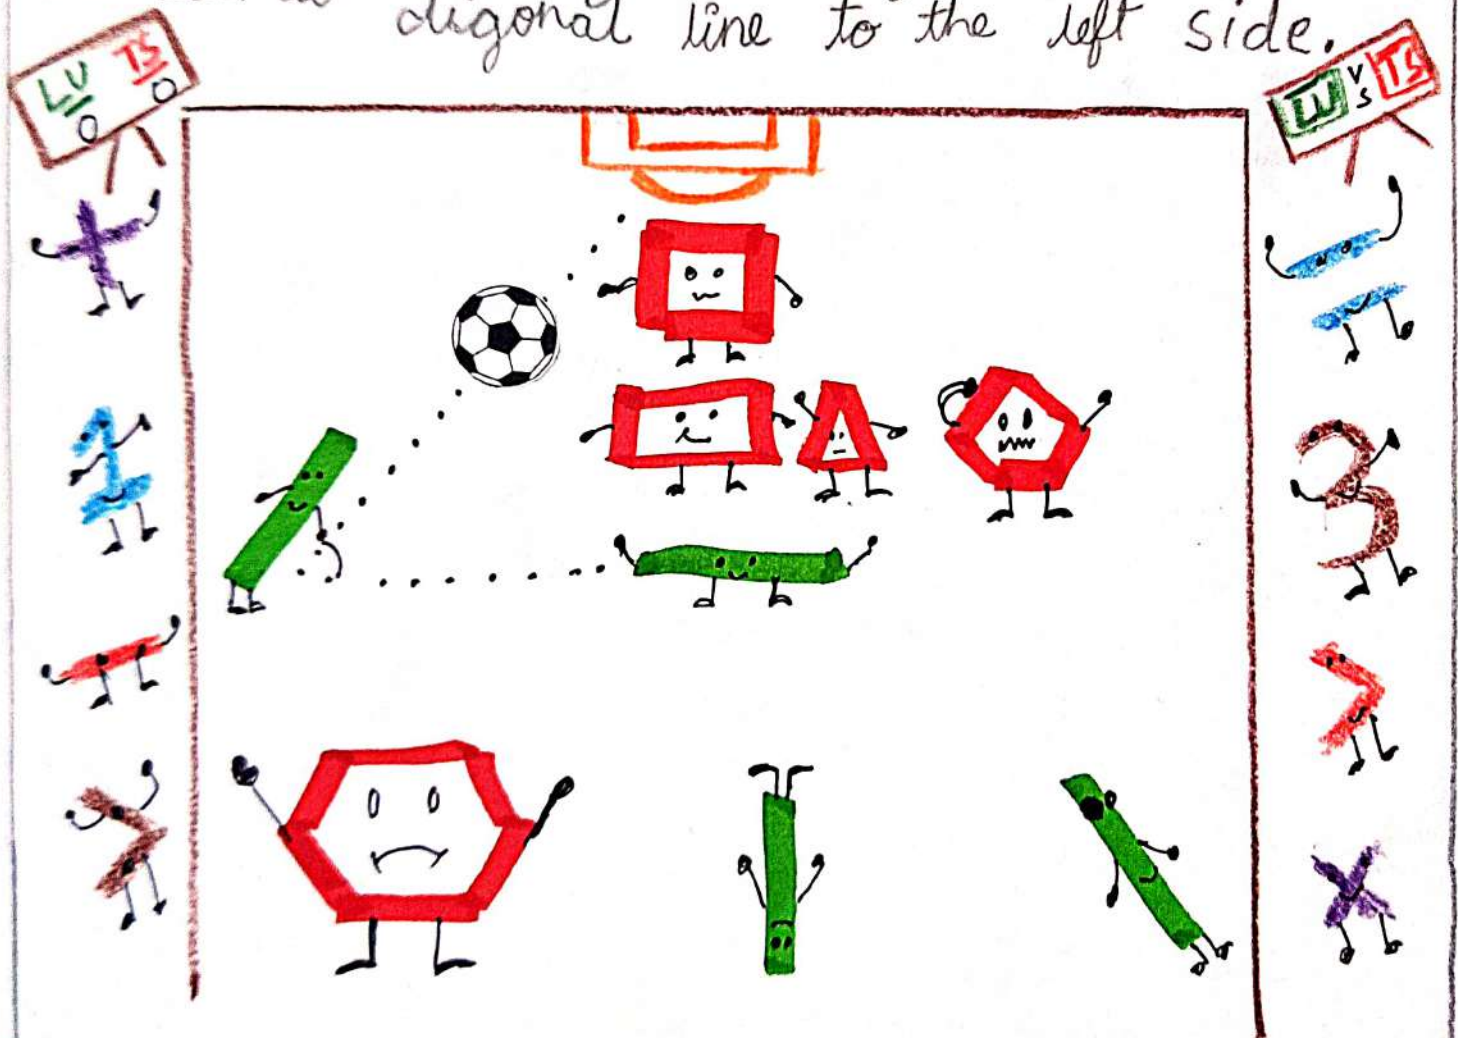

Then Mr. Protractor gave a sign to make an Obtuse angle.

Then the Diagonal line passed the ball to Horizontal line towards the opponent's goal post, by following Mr. Protractor's sign. This formed an **Obtuse angle**.

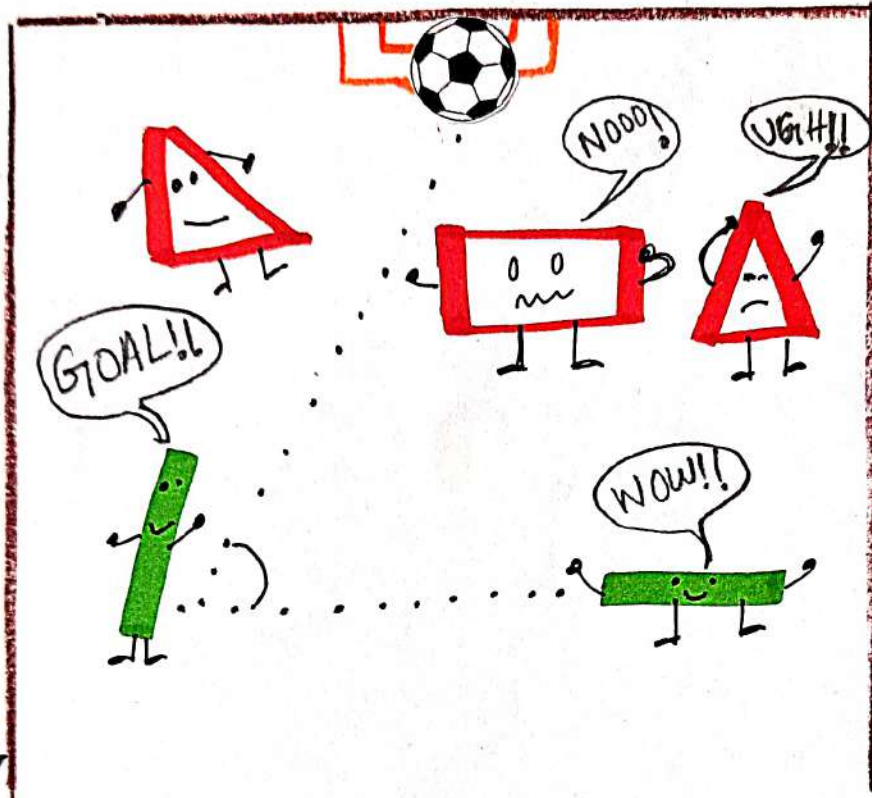

The goal post was near but it was entirely guarded on the left by big polygon defenders, the only way to score a goal was to pass it to an agile diagonal line on the left side who had a clear shot at the goal. Horizontal line passed the ball to diagonal line to the left side.

Diagonal line ran as he could. He connected with the ball and kicked the ball at an **Acute angle** to score a goal !!!

The crowd waited in awe as they saw the ball zoom into the goal while the rectangle goalie tried to defend it in vain.

The referee blew the whistle announcing the end of the match and both teams had scored the same numbers of goals. The match was declared draw.

Polygons came forth and said to the Lines United, we underestimated you by calling "simple lines". However you worked well together as a team to form various types of angles and score two goals against us. Mr. Protractor trained you well!!

The Lines United, realised that they are stronger and vowed to keep up the same team spirit going forward!!
