

FIEND CORONA

A short story of repeated addition \rightarrow "Multiplication"

The story Illustrated by K. Veda Vyas

Hi friends,
Let's go to park
and join our
friends to play.

Name: vedu

Hey!
No, we can't
join them.

Name: Sam

Name: Tei

But 'why'
'why'?

Hmm,
'y'

LOOK! we need to protect ourselves
from COVID-19, which is a virus spreading

fast all over the world.

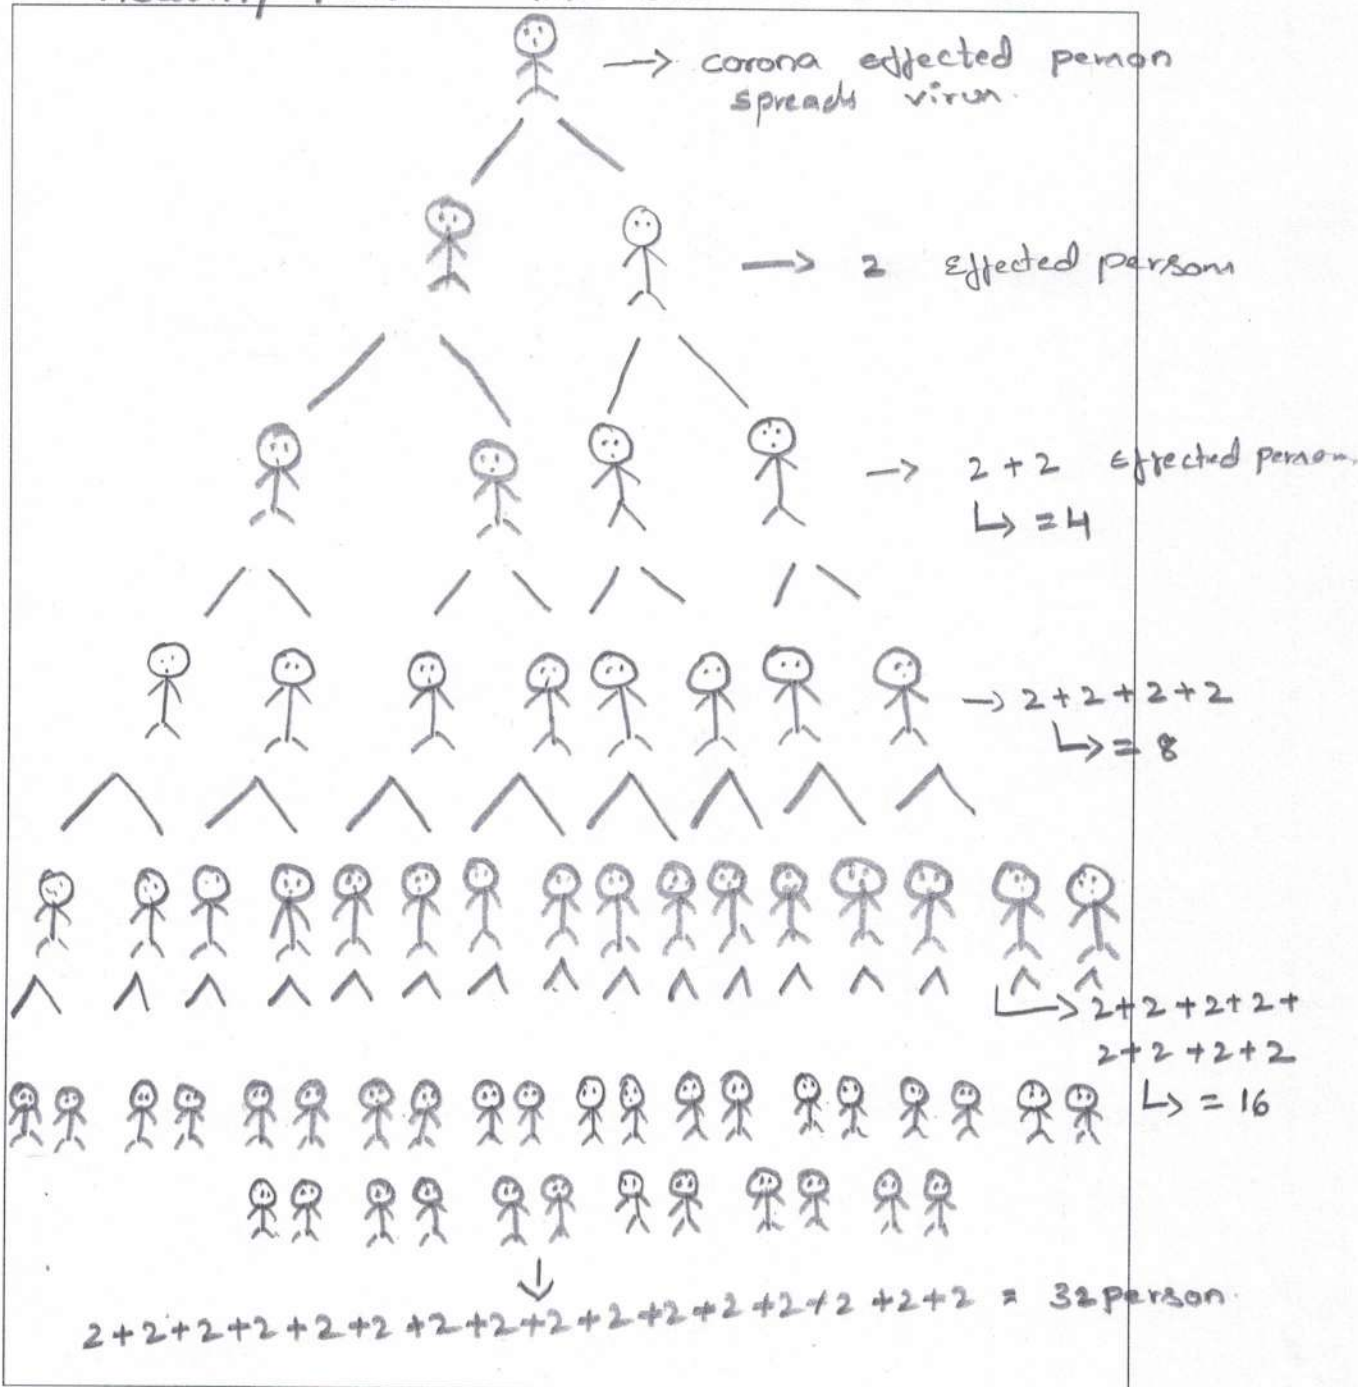

oh!
what's that

It's deadly virus
affects our Respiratory
system. IF neglected,
leads to death. It
transmits from one to
person to another.

If one person can spread the virus to any two healthy persons. The chain follows as.

Total effected persons = $2 + 2+2 + 2+2+2+2 + 2+2+2+2+2+2+2+2 + 2+2+2 = 62$ persons
and also can be written as $2 \times 31 = 62$ persons.

We can break this spreading chain by the following precautions

- 1) By quarantining the infected person
- 2) Wash hands regularly for 20 sec.
- 3) Avoid close contact with sick people.
- 4) Don't touch your face with unclean hands.
- 5) Stay home with hygiene conditions.

By following above precautions we can
kick off the virus and live happily
ever after and can play together.
